Language research in service to the nation.

www.casl.umd.edu
The University of Maryland Center for Advanced Study of Language (CASL) transcends boundaries to conduct academically rigorous research in foreign language and national security. Our research is interdisciplinary and collaborative, bringing together people from the government, academia, and the public. Our research is both strategic and tactical, so that it not only advances areas of knowledge, but also directly serves the critical needs of the intelligence community, and ultimately the nation.

**Good Science**

The CASL facility houses state-of-the-art laboratories to support work in brain imaging, classroom observational research, effects of stress and fatigue on job performance, and testing cognitive abilities in language learning and use.

**Flexibility**

CASL employees vary their schedules and sometimes telecommute, depending on the work at hand. Our culture is conducive to both a rich academic and personal life, with excellent benefits, including health insurance, generous annual leave and holidays, and tuition remission.

**Interdisciplinary Collaboration**

The opportunities to work with experts from different fields abound at CASL. CASL is the only research center in the country that has such a unique convergence of multiple fields, such as psychology, education, anthropology, sociology, public policy, hearing and speech sciences, English, communication, engineering, business, and library sciences, among others.

**Great People**

We could not accomplish our ambitious research goals without the people who drive CASL’s work every day. With over fifty researchers strong and growing, CASL draws from the best scholars and experts to accomplish its research. There are many opportunities to shape the culture, the research agenda, and the future of CASL.

**University Ties**

As the University of Maryland Center for Advanced Study of Language, the University is key to our success. As University of Maryland employees, researchers at CASL can offer independent and unbiased findings. Many of our researchers are affiliated with campus departments, participate in University activities and teach or take classes on campus.
